

## Narrative Report from Denmark 2012

Denmark has fairly good surveillance, data but no recent behavioural studies (due to lack of funding), so we will have to refer the answers of MSM-questions to the EMIS study. Due to our very decentralized health care system, we have - at the moment - no better data about IDU's, than what is already submitted to EMCDDA.

Data about treatment 4.1 to 4.2 are not collected by or referred to the national authorities, but is stored in a privately owned database. Data are not available for 2010.
